

MassAlert

MassAlert is an advanced software program that utilizes a graphical user interface for overall control and monitoring of Mass Notification System (MNS). MassAlert is customized for each client's specific system and utilizes field unit icons layered onto location maps and building diagrams of the system to provide system overview and at a glance status. The Fast Alert feature allows easy access to preconfigured alerting options so users can activate the system quickly - even when under severe distress. In addition, MassAlert is built on a .NET platform providing the flexibility and scalability for it to be interfaced with a wide variety of associated notification services, systems and solutions.

Features

- Single point of activation for entire MNS
- Easy to use graphical interface utilizing location maps and system sub-views
- Fast Alert for most frequently used activations
- Monitors and displays field unit status
- Control up to 255 field units and 16 control stations
- Up to 130 events
- Minimal training required
- Easily configurable
- Sends email notifications to a specified list of recipients
- Displays messages on specific web pages and sends them to RSS clients subscribed to those notifications
- Displays pop-up messages with text, audio and/or messages to networked computers using a small client application
- Highly scalable and flexible solution with multiple notification options
- CAP (Common Alerting Protocol) Compliant
- DIACAP capability available

Notification methods supported by MassAlert:

- Outdoor high powered speaker systems
- Indoor speaker systems
- Strobes
- Flat Panel Monitors (Optional)
- Message Boards (Optional)
- Weather/Alert Radios
- SMS/Text messages (Optional)
- Alpha-numeric pagers
- Email messages (Mass email optional)
- Network pop-ups
- Phone calls (Optional)
- Facsimiles (Optional)
